## To Enhance Platform Engagement

## About Hunch

- Hunch is a social media app designed to connect users through anonymous polling. It offers a unique platform where users can express their true personalities and opinions while discovering like-minded individuals. With a focus on privacy and genuine interactions, Hunch aims to foster honest conversations and social discovery.
- Co-founded in 2022 by Ish Goel, Nitika Goel, and Kartic Rakhra, Hunch
- Recently, Hunch secured \$23 million in funding from Alpha Wave Global and Hashed.

## Statistics

**Downloads****1M+****Rating****3.7 of 5****Monthly Active  
Users****220,000**

- Engagement: Average user spends 30 minutes per day on the app.
- Growth: Achieved 150% year-over-year growth in user engagement.

## Vision And Mission

- Vision: To create a safe, engaging, and personalized social media platform where users can freely express themselves and build meaningful connections.
- Mission: To revolutionize the way people interact online by leveraging anonymous polling and mood-based content customization, enhancing user engagement and emotional connection.

Market Growth

Market Growth of Social Networking in next 5 years

USD 81.42 B  $\xrightarrow{\text{CAGR } 17.09\%}$  USD 179.22 B  
FY 2024 FY 2029

Market Size

Number of active social media users, in millions, By Country, Asia Pacific, February 2022

- **Massive User Base:** India has 467 million active social media users, representing a significant target market. Growth
- **Opportunity:** With a large and growing user base, and there is substantial potential for user acquisition
- **engagement.** Strategic Focus: Prioritizing India for Hunch can leverage this vast user base to drive adoption and increase average revenue per download.

RPD

The graph shows a decline in average revenue per download for Hunch from \$1.49 in 2017 to around \$0.54 in 2024. This trend suggests a need to explore new monetization strategies to enhance profitability. Despite the drop, the revenue per download has stabilized since 2022, indicating potential for strategic improvements to drive growth.

Customer Insights

- Stabilization observed in revenue per download since 2022, indicating a plateau.
- A decrease in average revenue suggests potential shifts in user engagement or spending patterns.
- Need to explore new monetization strategies and enhance user engagement to boost profitability.
- Opportunity to capitalize on stable user engagement to introduce new features or premium services.

Rohan  
High School Student

Background

Rohan is 16 years old teenager from Mumbai who is active on social media, especially Instagram and Snapchat and enjoys participating in online trends and sharing opinions with friends

Pain Points

- Lack of platforms that cater specifically to teenage opinions in India
- Difficulty in finding relevant and engaging content
- Lack of motivation to engage more
- Privacy concerns when sharing personal thoughts

Goals

- Express opinions and know opinions of peers
- Discover new trends and topics
- Earn rewards and recognition for participation

Rahul Yadav  
Introvert Adult Boy

Background

Rahul is a 28 year old marketing manager at a tech firm in Bengaluru. With a busy schedule full of meetings and tight deadlines, he enjoys casual online interactions during breaks to unwind. Despite being active on social media, she finds traditional platforms too crowded for meaningful discussions.

Pain Points

- Limited time for lengthy interactions
- Need for a balance between work and relaxation
- Lack of engaging platforms for quick, casual discussions

Goals

- Seek quick and enjoyable ways to relax
- Share opinions freely and anonymously
- Enhance her user experience with premium features

# HunchIT

After participating in polls and accumulating hunch points, users will receive notifications when their total hunch points reach t any reward Hunch points. They can either skip and explore the rewards section.

This is the reward section in the profile, user can explore various rewards.

After clicking on reward, user can see the section of Redeemed rewards and live Rewards

All the rewards that can be claimed will repress every month.

# HunchIT

User can see the rewards they have already redeemed and how many are left of each type which they can get it by their Hunch points.

## Impact

- The prospect of achieving rewards incentivizes users to actively participate and interact on the platform.
- Notifications notifies users of their progress towards earning rewards, encouraging continued engagement.
- Overall, this feature contributes to increased time spent on the app.

# Moody Hunch

After opening app also user can change its mood type  
While Opening app we can find how is the Mood of User

After clicking on AI button you get two option either you can explain your mood by giving answers of AI generated Polls or by briefly describing your mood in paragraph

This is AI button from where you can tell us more about your Mood

## Impact

- 1.Enhancing emotional connection with personalized content strengthens user retention, making them feel understood and encouraging frequent interactions
- 2.Boosts user engagement with personalized content that resonates with their mood, increasing satisfaction and usage frequency.

Now the circle section is divided into Private and Public Circles. Users can navigate into Public Circles to view the currently joined Public Cirlces

On clicking the plus button option of joining and creating circles opens

# CircleHub

Users can search for communities to join from the search bar

Users can Join recommended communities, recommendations will be based on the user preferences

# CircleHub

Friends in circles can comment on the polls which are shared in the circles

Users can now send the polls as it is to the private circles by clicking on the send to circles button

## Impact

- Increases community engagement by allowing open, anonymous discussions.
- This feature fosters a sense of belonging and encourages users to participate more actively in discussions and polls, boosting overall activity on the platform.
- Private Circle enhances user engagement through exclusive, private interactions by comments. By offering a safe space for more personal and public connections users are likely to spend more time on the app, contributing to higher retention and deeper user relationships.

### 1 Survey and Segmentation

- Conduct surveys and identify the user needs, pain points and category of users who would benefit from the introduction of new features
- Focus on social media-active teenagers who enjoy interactive and engaging content and adults who are into anonymous opinion sharing

### 2 Beta Testing

- Provide early access to a select group of users who are highly engaged and have shown interest in participating in beta testing.
- Collect feedback from beta testers to refine the features and address any potential issues before the full release.

### 3 Targeted Marketing Campaign

- Run targeted ad campaigns on social media platforms, emphasizing the anonymity, rewards, and personalized content.
- Engage influencers to create buzz and reach a wider audience.
- Promote user-generated content, such as polls and community activities, to highlight the platform's engagement and reach.

### 4 User Testimonials

- Use success stories and testimonials to enhance the credibility
- Encourage users to share their achievements and experiences, fostering a sense of community endorsement.

### 5 Monitor Success Metrics

- Continuously monitor key metrics like user engagement, active users, poll participation rates, and reward redemption. Implement regular
- updates and enhancements based on user data and feedback to keep the platform relevant and user-friendly

# Possible Pitfalls

## Insufficient content

**Pitfall -** After selecting Mood if user won't get enough good content to consume they may leave the platform

**Solution-** We will provide content other than its selected mood too but in less percentage compare to selected one

## Algorithmic Accuracy

**Pitfall -** Inaccurate recommendation leading to user frustration

**Solution-** Implement continuous algorithmic improvement through user feedback and real time data analysis

## Overwhelming rewards

**Pitfall -** User will refrain from buying premium model after getting its features as rewards

**Solution-** In rewards provide very limited features just to excite them for buying premium model

## Feature Confusion

**Pitfall -** Introducing too many features in circle may lead to confusion

**Solution-** After launching user must be guided to every part of new feature when using it for first time

**Thank you!**
